CASE STUDY ON: NETFLIX'S PERSONALIZATION STRATEGY.

"Empowering audiences worldwide with a personalized entertainment experience, driven by innovation, data-driven insights, and a passion for storytelling."

BACKGROUND :

➤ Tina, a marketing specialist, comes home from work on a Friday evening, has a pending work project due on Monday.

➤ As she scrolls through her inbox, she notices the Netflix tab open on her browser. Despite feeling guilty, she rationalizes that taking a short break will help her focus better later.

➤ She clicks on the Netflix tab, where a personalized recommendation for a new show catches her attention. As she scrolls through the Netflix homepage, she's presented with a personalized recommendation for a new show that's similar to her favorite show. The recommendation includes a brief description, a catchy trailer, and a "Top Pick" badge.

Situation :

Tina's binge

watching

decision

Tina's Productivity Dilemma

Ego Depletion

After a long day, Tina's mental energy is depleted, making it harder for her to make decisions. The numerous options on the Netflix homepage overwhelm her, and she starts to feel decision fatigue.

Top Results

Limited Series

Teen Romance

The Workplace

Priming

The priming effect makes Tina more likely to click on the show and start watching, rather than continuing to browse through other options.

NETFLIX

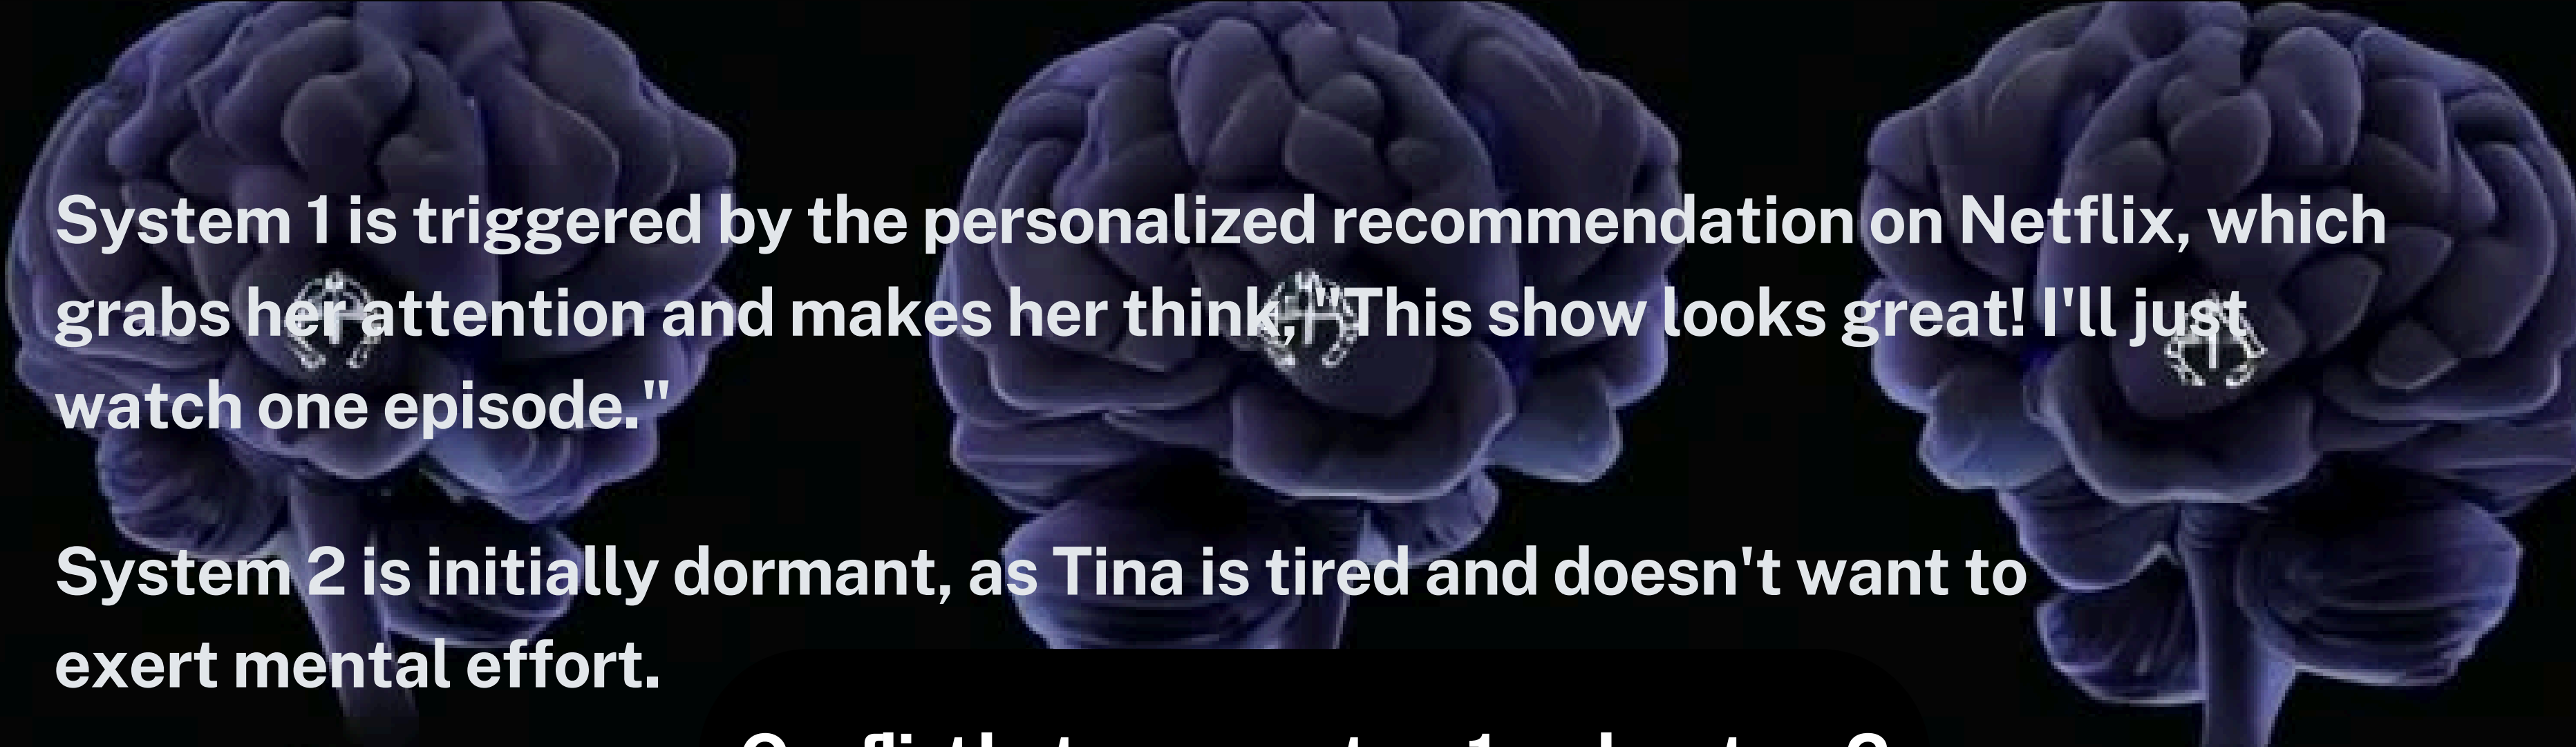

Heuristics

As Tina starts watching the show, she uses the availability heuristic to judge its quality. She remembers that the last show she watched on Netflix, which was also a "Top Pick," was excellent.

Thanks to the personalized recommendation, priming effect, and availability heuristic, Tina decides to watch the new show and enjoys it. She feels satisfied with her decision and appreciates the convenience of Netflix's recommendation algorithm.

System 1 and System 2

System 1 is triggered by the personalized recommendation on Netflix, which grabs her attention and makes her think, "This show looks great! I'll just watch one episode."

System 2 is initially dormant, as Tina is tired and doesn't want to exert mental effort.

2005

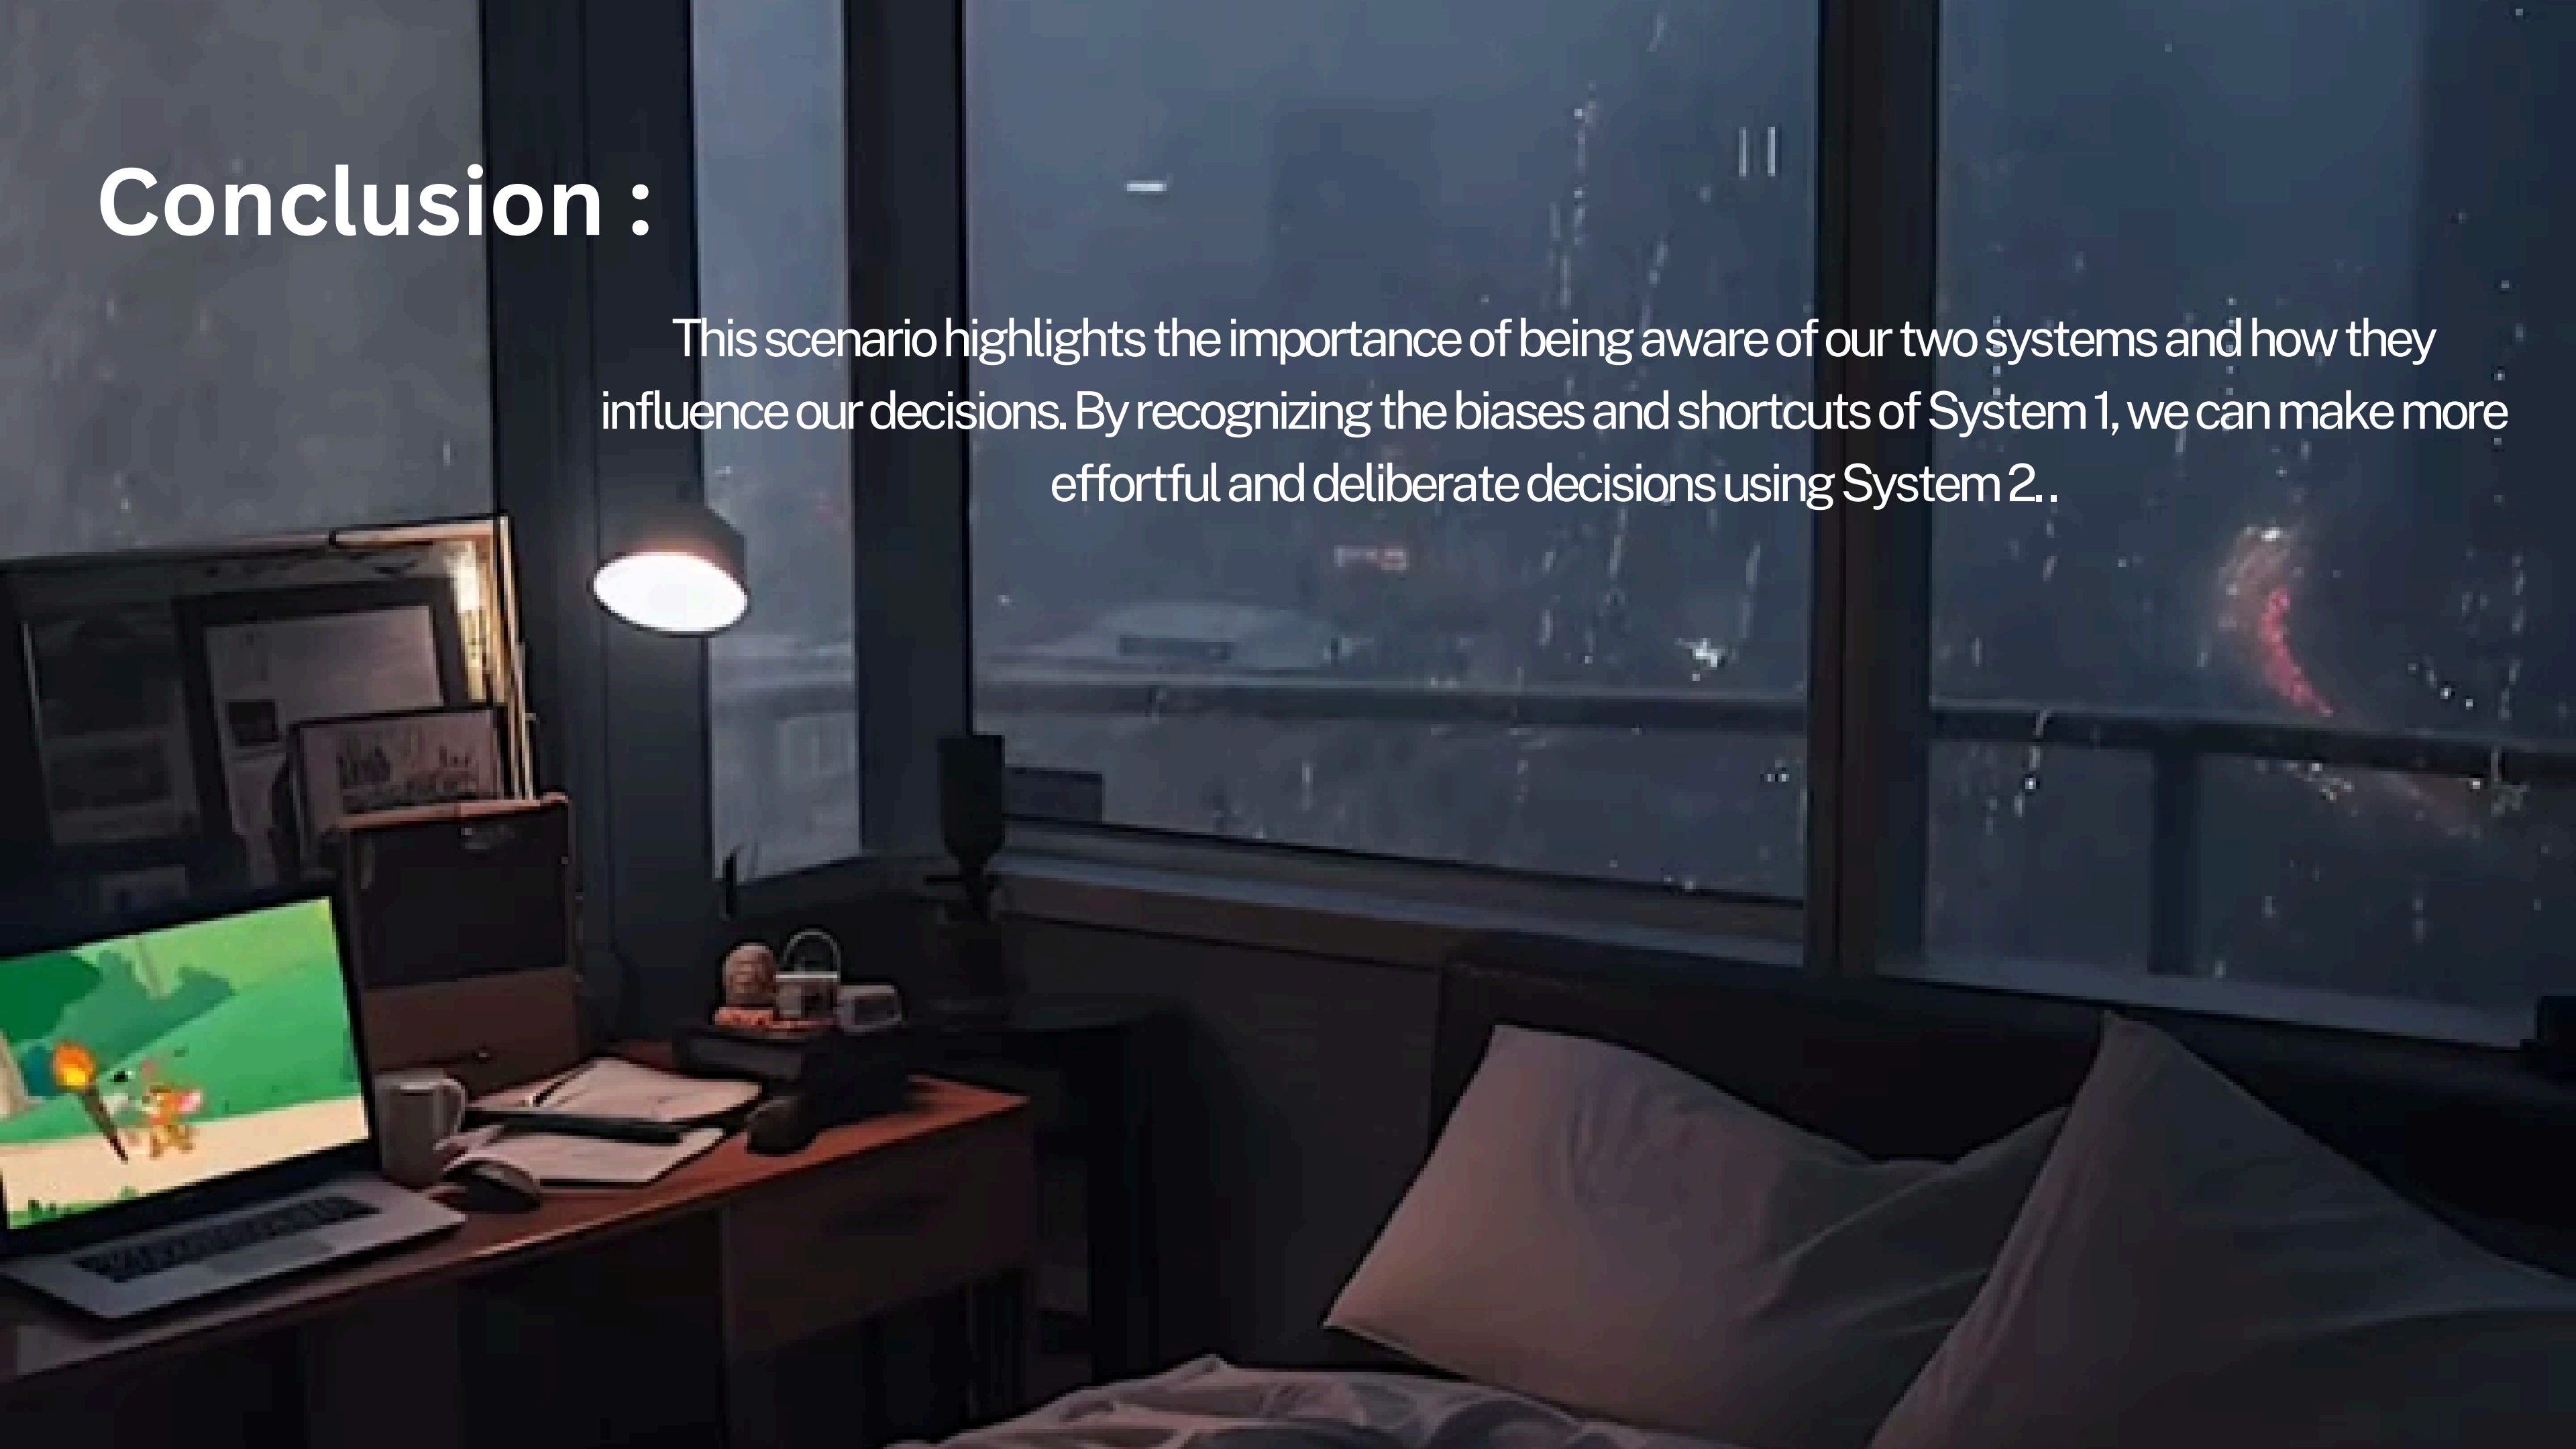

Conflict between system 1 and system 2

SYTZ

In this situation, there is a conflict between Tina's System 1 and System 2. System 1 is driving her to watch Netflix, while System 2 is warning her about the consequences of procrastination.

Conclusion :

This scenario highlights the importance of being aware of our two systems and how they influence our decisions. By recognizing the biases and shortcuts of System 1, we can make more effortful and deliberate decisions using System 2..
